THIS IS UNEVALUATED INFORMATION

This document contains information affecting the national defense of the United States. It is the property of the Central Intelligence Agency and is loaned to your agency. It and its contents are not to be distributed outside your agency or to persons outside your agency without the express written consent of the Director of Central Intelligence. The recipient is responsible for its security and dissemination.

"Work on the clearing, deepening and widening of various sectors of the Baltic-White Sea Canal was intensive during April, 1953. On the sector of the Canal between Kondopoga and Belomorsk the work proceeded day and night, without respite. The work sites were illuminated at night by military searchlights. The electricity supplied by floating electric power stations. Over 7,000 civilian workers, organized into 50 workers' brigades, and about 3,000 Soviet soldiers of the Engineer Corps were employed on this sector."

"About nine km south of the port of Ladvoitsey a new military hydroplane base is under construction. The work site is completely closed to outsiders. It is located by units of the Lake Onega Flotilla. The base of this flotilla is situated in the port of Petrozavodsk."

"On Klimachev Island in Lake Onega, and in the port of Shala on the southern coast of Lake Onega, large military radio stations are being built, most probably for the use of military aircraft."

"Since mid-April 1953 a new airfield and a base for launching heavy rockets and missiles has been completed and put in operation on a peninsula some 55 km north of the port of Kondopoga. The airfield is connected by a dam and a two-track, narrow gauge railway line with a military supply base now [May 1953] under construction in Lake Onega."
